

## Clinical categories for private health insurance hospital product tier arrangements

The table below defines the clinical categories, and hospital treatments included in each category, for private health insurance hospital treatment policies. Insurers are required to provide cover for all hospital treatments within the 'scope of cover' described in the table below for a clinical category that is included in a hospital insurance policy.

Notes:

<sup>1</sup> Sets out what must be covered by an insurance policy that covers hospital treatment for the relevant clinical category.

<sup>2</sup> A policy must cover any hospital treatments that are in the scope of cover of a clinical category included in the policy. Without limiting the scope of cover, for each clinical category this includes hospital treatments involving:

- any MBS item number listed in the third column below; and
- any MBS item mentioned in the separate Common and Support treatments tables of MBS items (except for the clinical category “Podiatric surgery (provided by a registered podiatric surgeon)”, for which there are no MBS items and the scope of cover states the minimum cover).

The description details for MBS items can be found at [MBS Online](#)

<sup>3</sup> Where an MBS item is mentioned for a clinical category in the third column in the table below, the treatment including that MBS item is most likely to be provided under that clinical category, or a clinical category in the same or a higher product tier. However, the mention of an MBS item against a particular category does not mean it is only ever covered under that clinical category. A doctor may also appropriately provide the MBS item as hospital treatment for another clinical category, which would be covered. Some clinical categories have no MBS items. If there are MBS items relevant to the clinical category they may be included in the Common or Support treatments lists. These lists are for MBS items likely to be relevant to multiple categories or that are likely to support the provision of a treatment under a clinical category (eg, pathology or anaesthetics).
